including LED dynamic controls and daylight management systems

Home Cinemas

Audio/Video Entertainment system

Cinema rooms

Acoustic system

STUDIO LIGHT

WHY STUDIO LIGHT? WHY LIGHTING DESIGN?

Private Residence, Adma, Lebanon

Lighting is the reason we favor one room in a house over another, why we're more comfortable in some offices than others and why we enjoy the experience of shopping in one store over another.

We are a professional team that uses light as the basic element in the expression of architectural space. The company strives to heighten visual cues that the individual experiences within an environment and to manipulate perception to affect any number of intended psychological responses. Using a variety of related knowledge, with lighting as the unifying element, appropriate solutions evolve naturally.

Whether it is architectural accentuation, energy savings, dramatic effects, or just comfort, each project is evaluated for its unique creative opportunity.

Philosophically, the design intent is to create the proper environment by integrating the use of concealed light sources, natural light, and decorative fixtures.

The careful integration of a collective design concept in every project guarantees success.
